

INSTRUCTIONS & REPAIR PARTS FOR MDX-MT3, TE-MDX-MT3 AND TE-MDK-MT3 “METL-LESS” PUMPS

PART NO.
0135-0036-0100, 115 VOLT
0135-0037-0100, 230 VOLT

MODEL
MDX-MT3
WITH OPEN, FAN-COOLED
MOTOR, 115 VOLT OR 230 VOLT

MODEL
TE-MDX-MT3
WITH TOTALLY ENCLOSED, MOTOR
AND CONDUIT BOX
DUEL-VOLTAGE, 115/230

PART NO.
0135-0088-0100

PUMP CONSTRUCTION AND SERVICING

March “ORBITAL” Magnetic Drive Pumps eliminate the conventional shaft seals found in most pumps. This means that there is no rotating seal to wear and allow the liquid being pumped to leak out. There are only two areas in this type construction that rotate and could wear out. One area is the motor shaft and bearings. The second area is the impeller-magnet assembly rotating on a stationary spindle, and hence these are the only two areas where wearing can occur.

All parts can be easily serviced and replaced in the field if necessary with the use of a screwdriver. See the Repair Parts List for necessary replacement items.

All ratings are based on pumping water. Depending on the pumping conditions, some liquids heavier than water may cause the magnetic coupling to slip. Contact the factory if this occurs for special instructions. The inlet and outlet ports are ½” M.P.T. threads.

PUMP MATERIALS

The 3 plastic parts in contact with the liquid are molded out of Ryton®, or Kynar® Plastic. The motor bracket is molded out of glass filled Polypropylene on the TE-MDX-MT3, and black glass filled Noryl on the MDX-MT3. The “O” ring gasket is Viton® “A” rubber. The stationary spindle and thrust washer are chemical resistant ceramic. Contact the factory for other materials available on special order.

ELECTRICAL & OPERATION

The MDX-MT3 motor is 115 volt, 50/60 cycle, 1 phase A.C.—230 volt motors are available.

The TE-MDX-MT3 motor is totally enclosed, 115/230 volt, 50/60 cycle, 1 phase A.C. See wiring instructions packed with each pump. Both motors are U.L. recognized.

Pumps are not self priming and will not produce a suction lift and must be installed with a positive flooded suction. The pumps should not be run dry for more than 30 seconds as the plastic impeller will squeal and may bind on the stationary spindle.
