DIRECT DRIVE PLUNGER PUMPS

Brass Models:

1CX013R, 1CX025R, 1CX050R

See page 4 for complete pump/motor model number selection for ordering.

Model 1CX050RA2
Motor-Pump-Unit Without Pulse Hose

FEATURES

- Ultra-compact, direct-drive pump and motor unit great for portability and small spaces.
- Four-position head mounting allows for plumbing flexibility.
- Oil bath lubrication ensures optimum drive-end lubrication.
- Pressure regulator offers precision pressure setting and over-pressure protection.
- Includes oil in crankcase.

NOTE: Pump is shipped with two black caps with O-Rings for shipping purposes. Remove black cap with O-Ring on top of pump and replace with loose red cap with O-Ring as supplied in box.

INLET

It is recommended to install a flexible hose at the pump inlet. Ensure there is a flooded inlet or up to 60 psi inlet pressure for optimum performance. Install an inlet filter to remove standard water debris.

DISCHARGE

All discharge plumbing for the 1CX pump connects to the regulator outlet port.

BYPASS

The regulator bypass is at the bottom. Connect a ¼" flexible hose and route to inlet of pump, to tank, or to drain.

NOTICE

Bypass to the pump inlet is designed for cold water or ambient temperature operation. **DO NOT EXCEED 6 MINUTES IN BYPASS OPERATION.**

Excessive temperatures will cause premature wear or damage to the pump and **VOID THE WARRANTY.**

PULSE HOSE MOUNTING

Mount the pulse hose by installing a tee fitting into the regulator outlet port. Install the pulse hose into the top port. Coil hose and tie wrap as shown. Add nipple with a tee to mount pressure gauge. The other end of the pulse hose is plugged to capture the pulse.

NOTE: Without a pulse hose, the pump may draw as much as 2 additional AMPS above full load AMPS.

OPERATION

A pressure regulator is included with each 1CX plunger pump. The regulator is not pre-set at the factory. Ensure inlet line and pump are filled with water (primed). Set system pressure once the system is started. Start at the lowest pressure reading and adjust the pressure adjuster in small increments until the desired system pressure is attained. Remember to service the regulator on the same schedule as the pump seals and valves. Refer to 1CX service manual for start-up, servicing of seals and valves, torque requirements and diagnosis/maintenance chart.

⚠ CAUTIONS AND WARNINGS

All high-pressure systems require a primary pressure regulating device (e.g. regulator, unloader) and a secondary pressure relief device (e.g. pop-off valve, relief valve). Failure to install such relief devices could result in personal injury or damage to pump or property. Cat Pumps does not assume any liability or responsibility for the operation of a customer's high-pressure system. Read all CAUTIONS and WARNINGS before commencing service or operation of any high-pressure system. The CAUTIONS and WARNINGS are included in each Service Manual and with each Accessory Data sheet. CAUTIONS and WARNINGS can also be viewed online at www.catpumps.com/dynamic-literature/cautions-and-warnings or can be requested directly from Cat Pumps.
