DATA SHEET DIRECT DRIVE PLUNGER PUMPS

Brass Electric 2SF10ES, 2SF20ES, 2SF22ELS,

Models: **2SF29ELS**, **2SF30ES**, **2SF35ES**

Brass Gas Models: 2SF30GS, 2SF35GS

Model 2SF10ES Shown (Unloader included with pump)

FEATURES

- Available in two configurations: hollow-shaft pump for direct mounting to gas engine or electric motor, or as motorized units.
- Includes regulating unloader to ensure system pressure control and pump protection.
- Pump comes standard with NBR seals. Alternative seal materials are available for higher temperature or chemical compatibility.

COMMON SPECIFICATIONS	U.S.	Metric
Inlet Pressure Range (Standard)	Flooded to 75 psi	Flooded to 5.2 bar
Inlet Pressure Range (High-Temp)	30-75 psi	2.1–5.2 bar
Max. Liquid Temperature (NBR)	160° F	71°C
Alternate seals available for high	er temperatures up	to 180° F
Bore	0.708"	18 mm
Crankcase Capacity	10.1 oz	0.31
Inlet Port (1)	3/8" NPT(F)	3/8" NPT(F)
Discharge Port (1)	3/8" NPT(F)	3/8" NPT(F)
Discharge Port (1)	3/8" NPT(M)	3/8" NPT(M)
Bypass Port (1)	1/4" NPT(F)	1/4" NPT(F)
Weight (Pump Only)	10.6 lbs	4.8 kg
Dimensions (Pump Only)	9.13 x 6.65 x 6.50"	232 x 169 x 165 mm

CHEMICAL INJECTOR PERFORMANCE CHART

Model	Pump Flow	Orifice Size	Maximum Injecting Pressure	Maximum Chemical Draw	Pressure Drop Across Orifice
7192	2 gpm	1.8	225 psi	60	150
7192	3 gpm	1.8	275 psi	60	300
7192	4 gpm	1.8	450 psi	60	500
7193	3 gpm	2.1	225 psi	54	150
7193	4 gpm	2.1	375 psi	54	250
7193	5 gpm	2.1	600 psi	54	400
7194	3 gpm	2.3	150 psi	50	125
7194	4 gpm	2.3	225 psi	50	220

Optimum performance of chemical injector occurs with a 35 ft high-pressure hose with a minimum %" ID The type of hose, extended lengths, reduced ID and fittings may create additional back pressures above the maximum injecting pressure rating of the injector and prevent it from drawing chemical.

TROUBLESHOOTING

INCODELSTICCTING					
No Chemical Draw:	 Low-pressure nozzle sized for too high-pressure 				
	 Air leak in suction line 				
	 Worn injector orifice 				
Leaking Around Adjusting Collar:	Worn O-ring				
	 Foreign material in injector

UNLOADER TYPE

Each pump comes with a pressure-sensitive regulating unloader. This unloader will set system pressure. While in bypass the line pressure will drop to a low-pressure mode and then quickly build up to set system pressure when the system is back to full use.

INSTALLATION AND START-UP

Install a pressure gauge close to the manifold head of the pump to assist in setting system pressure and to periodically monitor system pressure. Bypass line can be directed to the ground, a reservoir, redirected to the $\frac{1}{4}$ " NPT(F) port on bottom side of inlet manifold. If routing to pump inlet, use a $\frac{3}{4}$ " flexible hose and thermal valve.

Note: If not using a thermal valve, **DO NOT EXCEED 6 MINUTES** in bypass. **Note:** For high-temperature seal pumps, **DO NOT USE THERMAL VALVE.** Use optional dual pressure switches and mechanical relays.

Pump should be purged of air before commencing with operation. Liquid must flow through the pump without discharge restriction to ensure full system pressure is reached.

Setting and adjusting the unloader pressure must be done with the system turned on. Start the system with the unloader backed off to the lowest pressure setting (counterclockwise direction). Squeeze the trigger and read the pressure on the gauge at the pump. Do not read pressure at the gun or nozzle. If more pressure is desired, release the trigger, turn adjusting cap one quarter turn in a clockwise direction. Squeeze the trigger and read the pressure. Repeat this process until the desired system pressure is reached. Thread locking nut up to adjusting cap.

Note: Pressure is not set at the factory.

SERVICE

The unloader should be serviced on the same schedule as the seals in the pump. Refer to SF Plunger Pump Service Manual for start-up, servicing of seals and valves, torque requirements, diagnosis and maintenance chart.

△ CAUTIONS AND WARNINGS

All high-pressure systems require a primary pressure regulating device (e.g. regulator, unloader) and a secondary pressure relief device (e.g. pop-off valve, relief valve). Failure to install such relief devices could result in personal injury or damage to pump or property. Cat Pumps does not assume any liability or responsibility for the operation of a customer's high-pressure system. Read all CAUTIONS and WARNINGS before commencing service or operation of any high-pressure system. The CAUTIONS and WARNINGS are included in each Service Manual and with each Accessory Data sheet. CAUTIONS and WARNINGS can also be viewed online at www.catpumps.com/dynamic-literature/cautions-and-warnings or can be requested directly from Cat Pumps.
