

Model 12510-Series

SELF-PRIMING PUMPS

FEATURES

Body: Bronze
Impeller: Made of Neoprene, Nitrile, Viton*
Shaft Seal: Lip Type
Ports: 3/8" NPT Internal
 3/4" GHT External
Motor: 1/6hp - 115 Vac, 60 Hz. ODP Motor
 1/4hp - 115 Vac, 60 Hz. TENV Motor
 1725 RPM,
 Thermal Overload Protector,
 Stainless Steel Shaft,
 8 ft. Cord with 3 Prong
 Grounded Plug
Weight: 12 lb (5,4 kg)

WARNING

Explosion hazard. Do not use where flammable vapors are present. To do so can cause an explosion resulting in injury or death

WARNING

Explosion hazard. Do not pump gasoline, solvents, thinners or other flammable liquids. To do so can cause an explosion resulting in injury or death.

VARIATIONS AVAILABLE

Model Number	Description
12520-1001	Open Drip Proof Motor, Neoprene Impeller
12520-1003	Open Drip Proof Motor, Nitrile Impeller
12520-0271	Totally Enclosed Motor, Neoprene Impeller

Model 12510-Series

APPLICATIONS

INDUSTRIAL: Circulating and transferring, velocity-mixing, pumping machine tool coolants, return spill, sump drainage, pharmaceuticals, soap, liquors, ink, dyes, alcohol, glycerine, brine and pumping water for cooling heliarc welding equipment

FARMING: Pumping water for stock, pumping water from shallow wells and cisterns

MARINE: Washdowns, utility dock side pump

PLUMBING & HOME EMERGENCY USE: Pumping out flooded basements, cesspools, sumps, water heaters and water closets, drains and sinks, draining fishponds and small pools

PUBLIC UTILITIES AND MUNICIPALITIES: Dewatering and draining meter boxes and excavations, dust control and sampling

OPERATING INSTRUCTIONS

1. INSTALLATION: Pump may be mounted in any position. Inlet port is on the right and discharge port on the left when looking at end cover.

2. SELF-PRIMING: Vertical dry suction lift of 6 feet with Neoprene impeller. Pump will produce suction lift up to 20 feet when wetted. **BE SURE SUCTION LINES ARE AIRTIGHT OR PUMP WILL NOT SELF-PRIME.**

Note: Viton impeller suction lift requirement should not exceed 3 feet.

3. DISCHARGE LINE: When transferring liquids further than 25 feet, discharge line size should be increased to next available pipe size.

4. RUNNING DRY: Unit depends on liquid pumped for lubrication. **DO NOT RUN DRY** for more than 30 seconds. Lack of liquid will damage the impeller.

5. NOTICE: If pumping highly concentrated or organic acids, consult Jabsco Chemical Resistance Table (available upon request from Jabsco) for proper body materials and impeller compounds. When corrosive fluids are handled, pump life will be

prolonged if pump is flushed with water after each use or after each work day.

6. PRESSURES: Consult Head Capacity Table for recommended maximum pressures for continuous operation. If pressures exceed those shown, consult the factory for application assistance.

7. TEMPERATURES:

Neoprene: 45° to 180° F (7° to 82° C)

Nitrile: 50° to 180° F (10° to 82° C)

Viton: 60° to 180° F (15° to 82° C)

8. FREEZING WEATHER: Drain unit by loosening end cover. The following anti-freeze compounds can be used without adverse effects to the impeller: Atlas "Perma-guard," DuPont "Zerex" and "Telar", Dow Chemical "Dowguard" and Olin Mathison "Pyro Permanent." **DO NOT USE PETROLEUM BASED ANTI-FREEZE COMPOUNDS OR RUST INHIBITORS.**

9. SPARE PARTS: To avoid costly shut downs, keep a JABSCO Service Kit on hand.

EXPLODED VIEW**SERVICE INSTRUCTIONS****DISASSEMBLY**

⚠CAUTION Pumps which have handled corrosive, caustic or toxic fluids should be drained and completely flushed prior to servicing. Failure to do so can cause injury.

1. Remove screws, end cover and gasket/O-ring.
2. Withdraw impeller.
3. Loosen and remove two slotted hex screws, which attach body to motor.
4. Tap body lightly between ports and remove body from motor. Deform seal and remove from body cavity.
5. Press seal out of seal cavity.

NOTE: Do not tamper with or disassemble motor.

ASSEMBLY

1. Press seal into seal cavity with lip facing impeller bore. Lubricate lip of seal. The retainer supplied with the replacement seal is not normally required in this bronze body pump assembly.
2. Lubricate motor shaft and install body on motor.
3. Lubricate impeller bore and, aligning flat in impeller with flat on motor shaft, install impeller with a clockwise rotary motion.
4. Install gasket/O-ring, end cover and screws.
