

Model 4530-Series

SELF-PRIMING PUMPS

FEATURES

Body: **Bronze**

Impeller: Neoprene or Nitrile Shaft: Stainless Steel Shaft Seal: Packing Type

JABSCO®

Bearings: Plain 1/4" NPT Ports:

Weight: 1-1/4 lb (0,56 kg) approx.

VARIATIONS AVAILABLE

| MODEL | VARIATION INCORPORATED | | | | | |
|-----------|------------------------|--|--|--|--|--|
| 4530-0001 | Neoprene Impeller | | | | | |
| 4530-0003 | Nitrile Impeller | | | | | |

APPLICATION & OPERATING INSTRUCTIONS

MARINE: Pumping bilges, Washdowns, Circulating water in bait tanks, Utility dock side pump, Engine cooling.

INDUSTRIAL: Circulating and transferring, Velocity-mixing, Pumping machine tool coolants, Return spill, Sump drainage, Chemicals, Pharmaceuticals, Soap, Liquors, Inks, Dyes, Alcohol, Various acids, Tanning liquors, Glycerine, Brine, etc.

FARMING: Pumping water for stock, Pumping water from shallow wells and cisterns, Pumping liquid ballast into tractor tires.

PLUMBING AND HOME EMERGENCY USE: Pumping out flooded basements, Cesspools, Sumps, Water heaters and water closets, Drains and sinks, Draining fishponds and pools.

- 1. INSTALLATION Pump may be mounted in any position. Intake and discharge ports are determined by the direction of shaft rotation (refer to Dimensional Drawing). Before installing, turn the pump shaft in the direction of the operating rotation.
- 2. DRIVE Belt or Direct with flexible coupling. Belt Drive - Overtight belt load will reduce pump bearing life. Direct Drive is recommended for operating speeds above 1750 RPM. Direct Drive - Clearance should be left between drive shaft and pump shaft when installing coupling. Always mount and align pump and drive shaft before tightening the coupling set screw.

- 3. SPEEDS 100 RPM to the maximum shown in the Head Capacity Table. Consult the factory for operation at speeds above those shown. For longer pump life, operate at lowest possible speeds.
- 4. SELF-PRIMING Primes at low or high speeds. For vertical dry suction lift of 10 feet (3 m) a minimum of 800 RPM is required. Pump will produce suction lift up to 22 feet (6.7 m) when wetted. BE SURE SUCTION LINES ARE AIRTIGHT OR PUMP WILL NOT SELF-PRIME.
- 5. RUNNING DRY Unit depends on liquid pumped for lubrication. DO NOT RUN DRY for more than 30 seconds. Lack of liquid will damage the impeller.
- 6. NOTICE If pumping light fraction petroleum derivatives, solvents, thinners, highly concentrated or organic acids, consult JABSCO Chemical Resistance Table (which is available upon request from ITT Jabsco) for proper body materials and impeller compounds. If corrosive fluids are handled, pump life will be prolonged if pump is flushed with water after each use or after each work day.

Injury hazard. Exposed pulleys and belts can cause injury. Install shield around pulleys and belts. Stay clear while machinery is operating.

OPERATING INSTRUCTIONS (Cont.)

- PRESSURES Consult Head Capacity Table for recommended maximum for continuous operation. If pressures exceed those shown, consult the factory.
- TEMPERATURES Neoprene impellers are suitable for service at 45° to 180° F (7° to 82° C). Nitrile: 50° to 180° F (10° to 82°C).
- FREEZING WEATHER Drain unit by loosening end cover.
 The following anti-freeze compounds can be used without any adverse effects to the neoprene impeller: Atlas "Permaguard", DuPont "Zerex" and "Telar", Dow Chemical "Dowguard" and Olin Mathison "Pyro Permanent". Most Methyl alcohol (methanol) based anti-freeze can be used.

DO NOT USE PETROLEUM BASED ANTI-FREEZE COMPOUNDS OR RUST INHIBITORS

- GASKET Use a standard pump part. Thicker gasket will reduce priming ability. A thinner gasket will cause the impeller to bind. Standard gasket is 0.010" thick.
- 11. GREASE CUP Fill grease cup with water pump grease. Grease cup cap should be firmly tightened about every 50 hours of pump service while pump is operating. Leakage may occur through grease cup at pressures above 20 psi. If this occurs, replace grease cup with ball check grease cup.
- SPARE PARTS To avoid costly shut downs, keep a Jabsco Service Kit on hand.

DISASSEMBLY

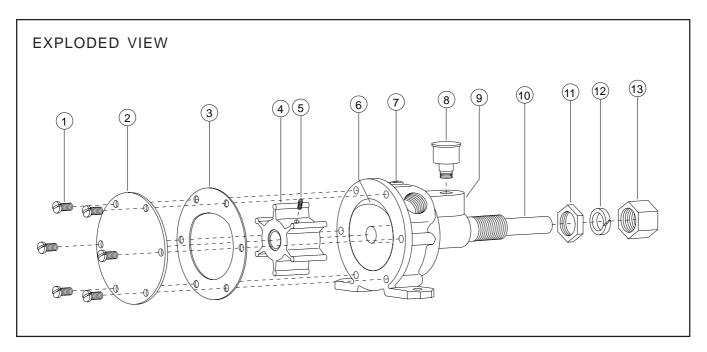

- 1. Remove end cover screws, end cover and gasket.
- 2. Remove drive coupling or pulley and loosen packing nut.
- 3. Clean and remove burrs from flatted end of shaft.
- 4. Remove shaft and impeller assembly from body.
- Remove drive screw from impeller and slide impeller off the shaft.

- 6. Remove cam screw and cam, clean off sealant.
- 7. Remove packing nut.
- 8. Remove packing with pick or screwdriver.
- Inspect all parts for wear or damage and replace if necessary.

ASSEMBLY

- Apply thin coat of sealant to cam screw threads and top and back end of cam and install in body with cam screw. (Leave loose.)
- 2. Position impeller on shaft and secure with drive screw.
- Lubricate impeller bore with a light coat of water pump grease, insert shaft and impeller assembly into body with a rotary motion.
- 4. Dip new packing in SAE 10 or 20 weight oil and install packing.
- 5. Install packing nut. Do not tighten.

- Install gasket and end cover with end cover screws. Tighten cam screw.
- 7. Fill grease cup full and grease cup cap 3/4 full with water pump grease. Install grease cup cap and tighten firmly.
- 8. Hand tighten packing nut. During operation, tighten packing nut until pump stops dripping; set locking nut. NOTE: Packing and shaft life will be improved if pump is allowed to drip about 3 drops per minute. After a few minutes of operation, re-tighten grease cup cap.

PARTS LIST

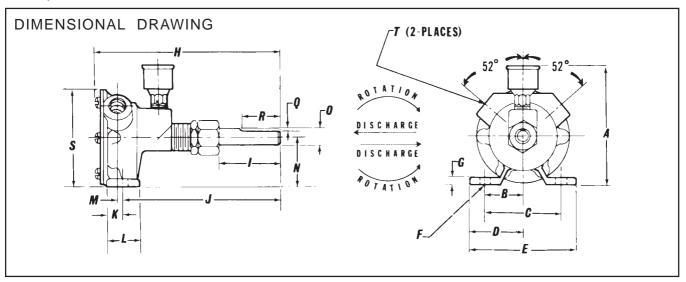

| KEY | DESCRIPTION | 4530-SERIES | QTY. |
|--------------|---|--------------------------|------|
| 1 | Screw (End Cover) | 91002-0010 | 6 |
| 2 | End Cover | 11835-0000 | 1 |
| 3* | Gasket | 1126-0000 | 1 |
| 4* | Impeller (Neoprene) Impeller (Nitrile) | 4528-0001 4528-0003 | 1 |
| 5 | Screw (Impeller) | 91009-0050 | |
| 6 | Cam | 4538-0000 | 1 |
| 7 | Screw (Cam) | 91002-0020 | 1 |
| 8 | Grease Cup | 91501-0010 | 1 |
| 9 | Body | 4534-0000 | 1 |
| 10 | Shaft | 4537-0000 | 1 |

NOTE: Progressively longer life may be expected as operating pressures and speeds are reduced. Factory Application Engineering assistance suggested for operation in heavy shaded area and recommended for light shaded area. Capacitor type motor recommended. Table shows approximate Head-Flow for new pump in U.S. gallons (and litres) per minute.
